Blog generation Module – User Manual v1.0

1. Login page

The user can log in using valid credentials.

- **Access URL:** https://xfactr-web.rehabmart.com/auth/login
- **Username: <name>@rehabmart.com**
- **Password:** Welcome@123 (this password is default and can be reset after login)

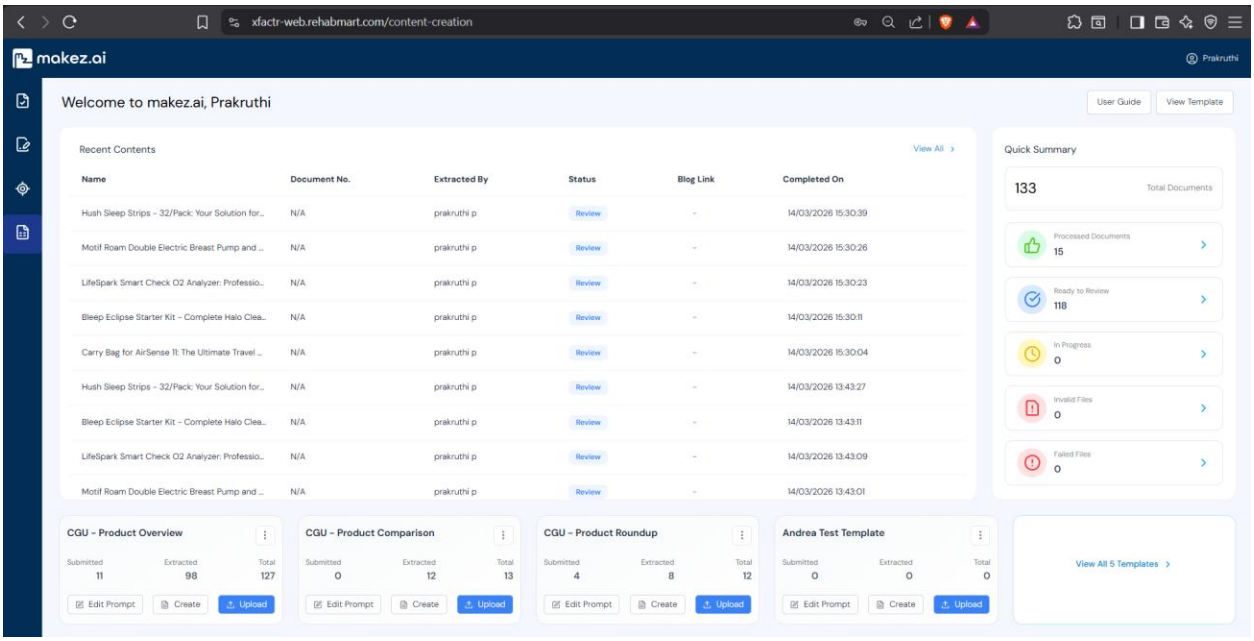

2.Home page

After successful login, the user is redirected to the **Home Page**, also referred to as the **Dashboard**.

Key Features:

- Displays a **summary of blog generated** and their current status (e.g., *Pending, Review, Submitted*).
- Quick access to generate new blogs using the **Upload** button.
- View recent activity or status of ongoing reviews.

3.File Upload

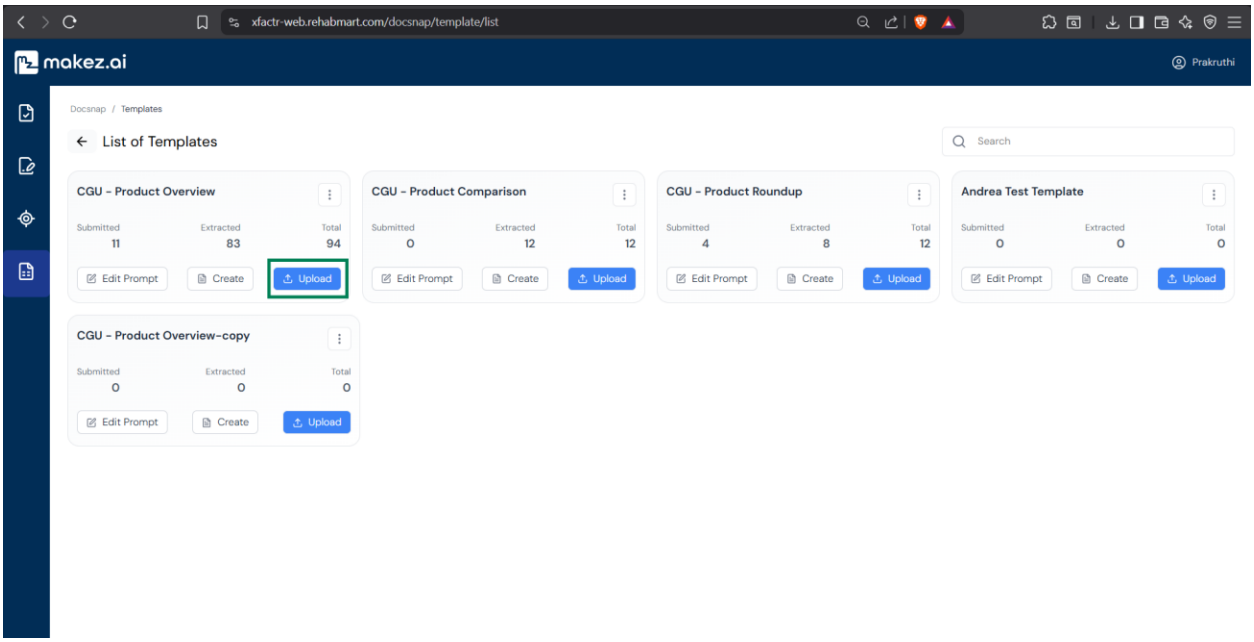

Here, users can upload files for processing and generating blog content.

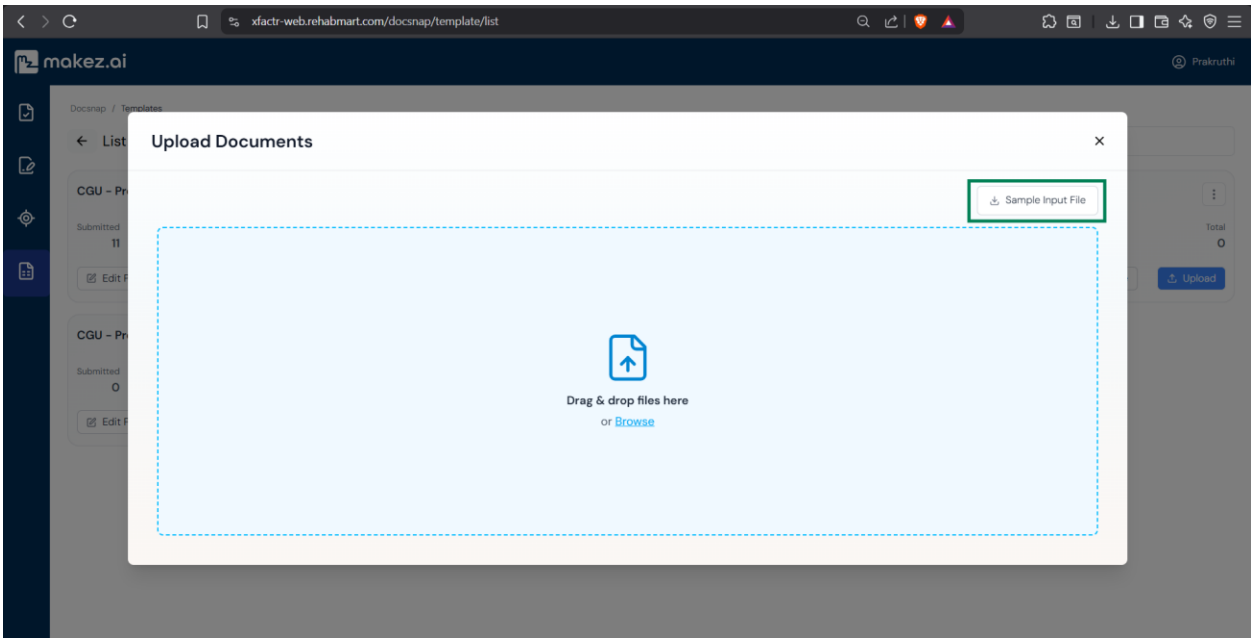

Steps to Upload a File:

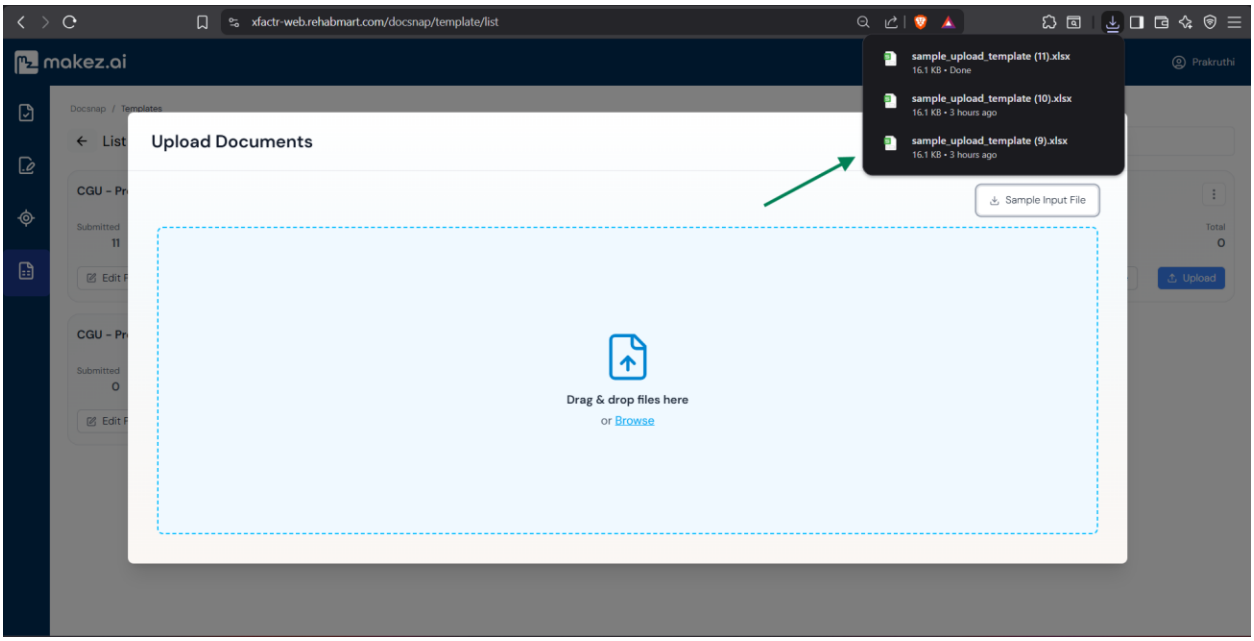

1. Click the **Upload** button on the template card.
2. Select or drag and drop the appropriate file based on the provided **template**. For time being up to 5 product details can be uploaded.
3. Also, Users can download the **Sample Input File** from the Upload page to understand the required input format as shown in the below image.
4. Alternatively, the user can click the **Create** button and create a single blog by filling out the **Create Blog** form.

   Reference Template format : Bloggenrationtemplate

a. Download sample input file

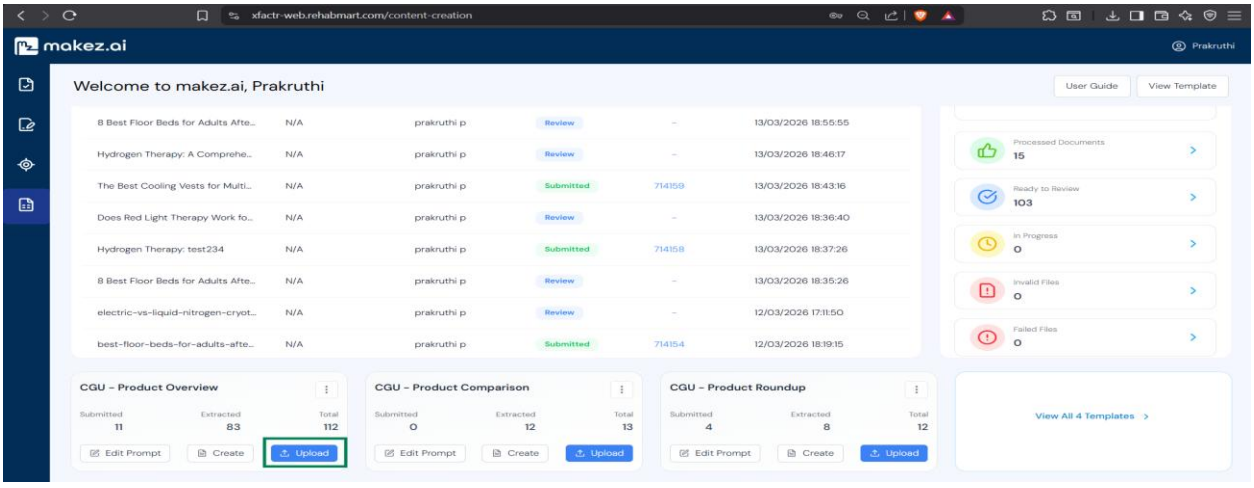

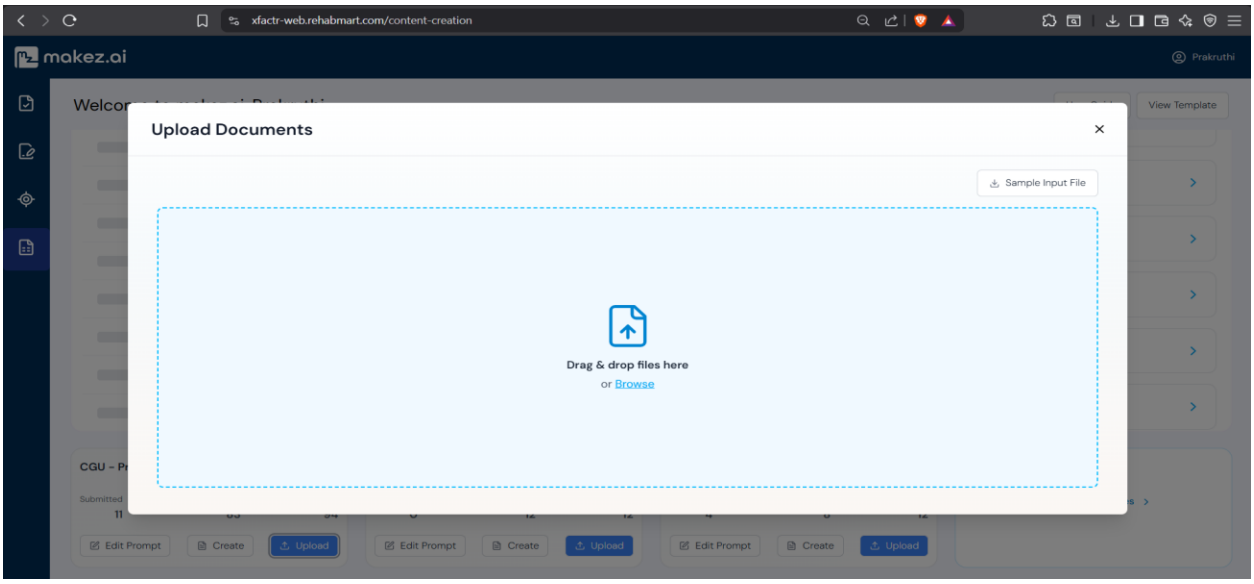

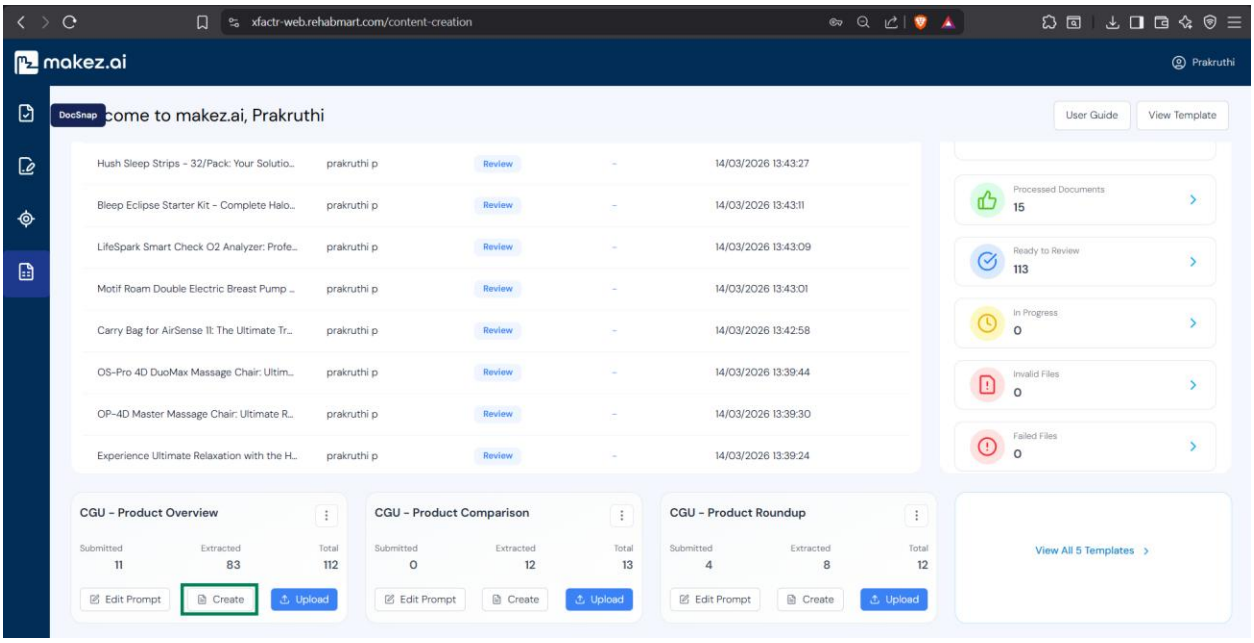

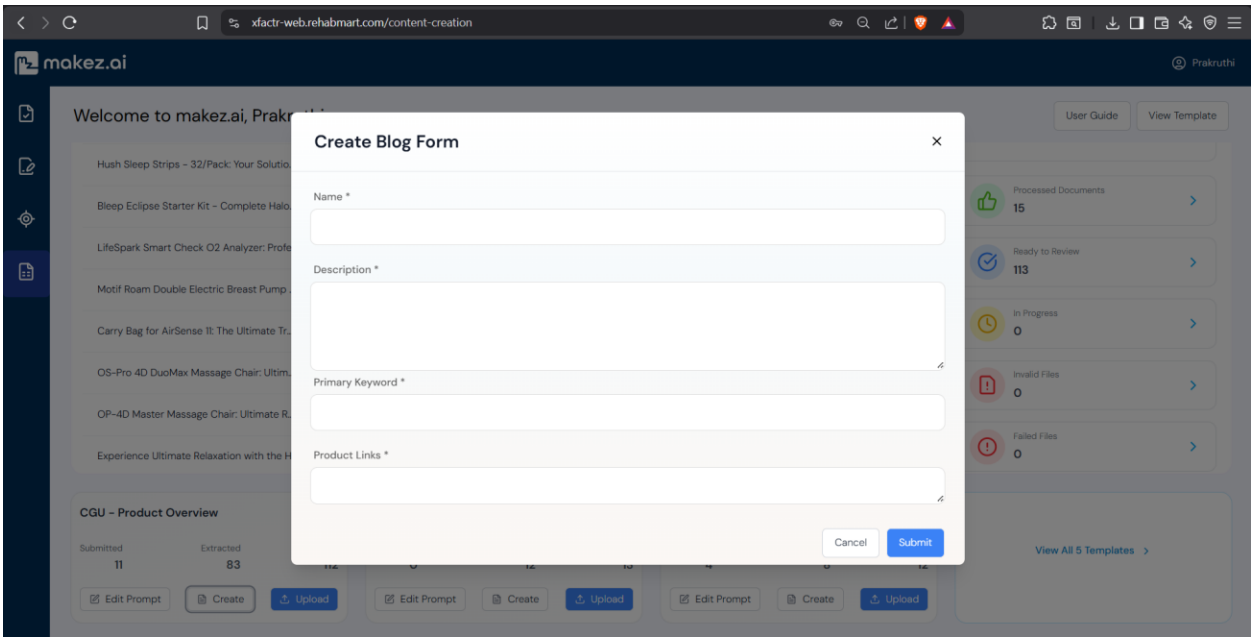

b. Upload Blog Generation input file via the Upload Button

c. Generate a Single Blog Using the Create Button

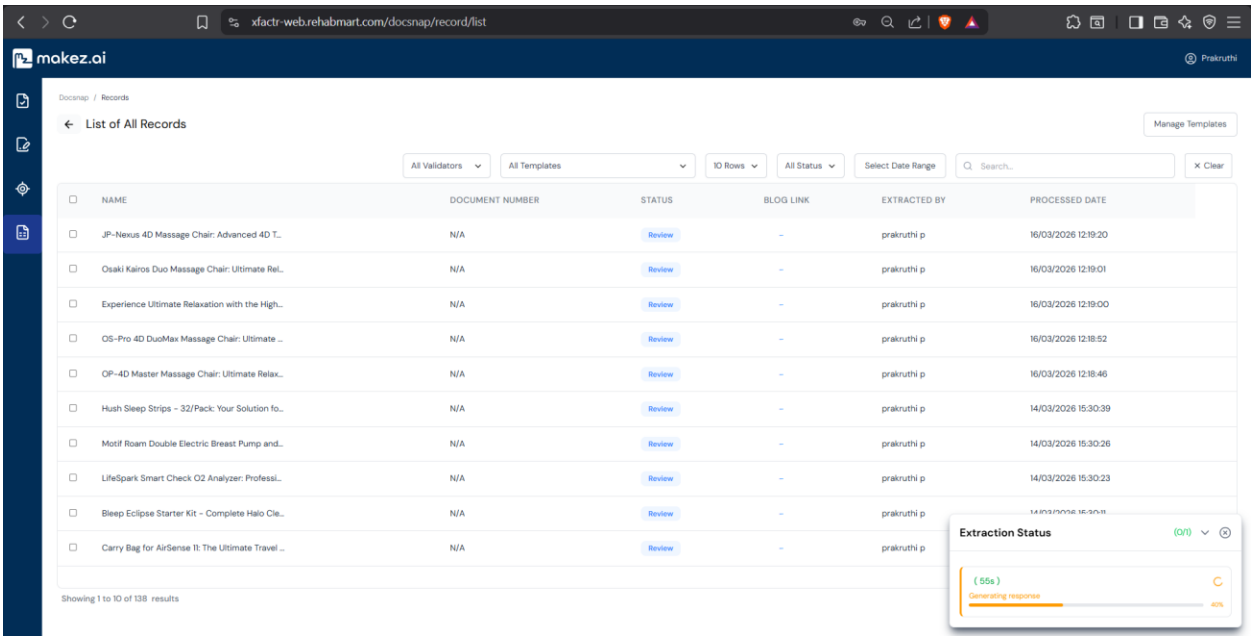

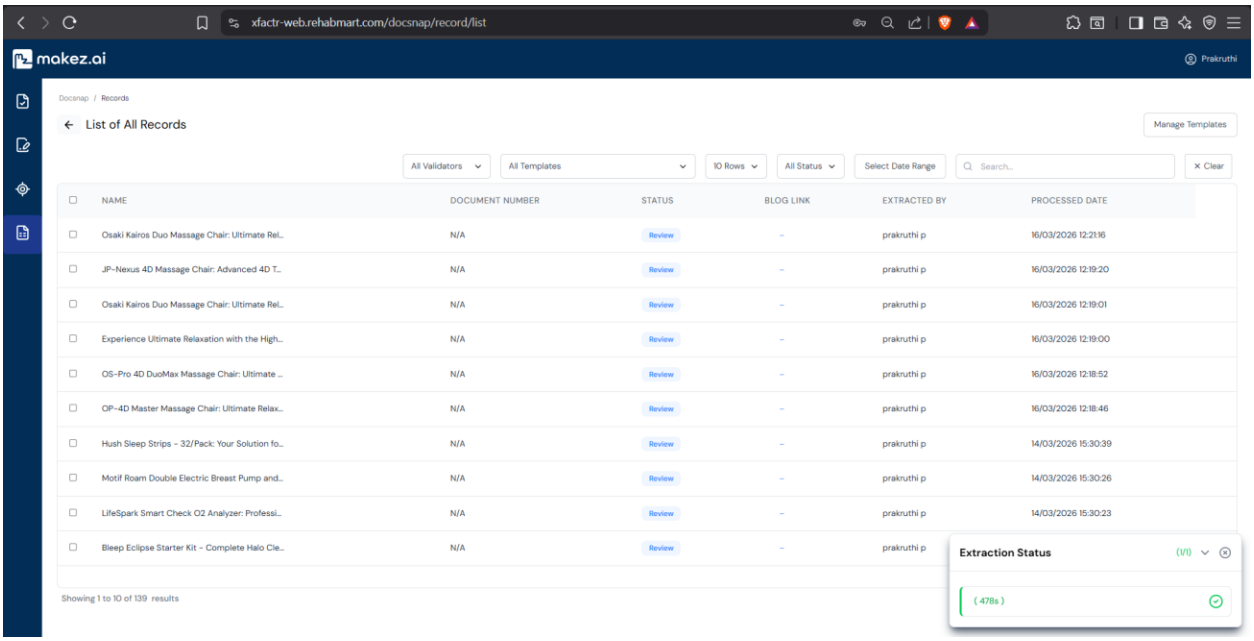

4.Progress Bar

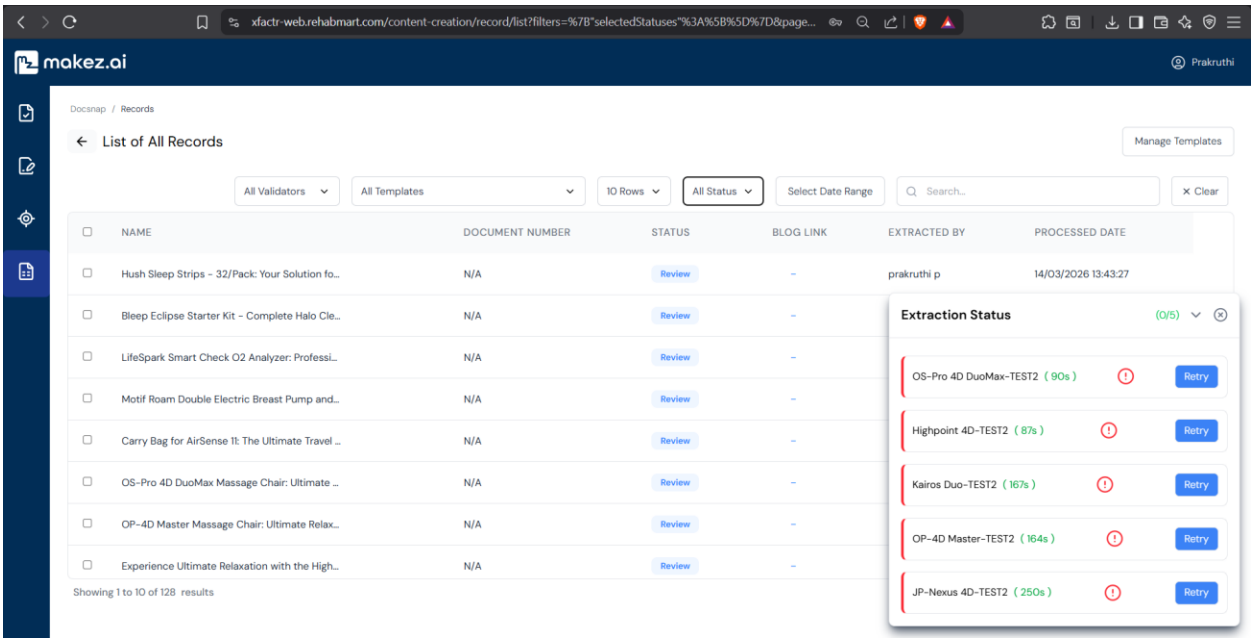

After uploading a file, a **progress bar** appears to indicate the upload/processing status.

- The bar shows **the real-time progress** of blog generation.
- Once the process is completed, the system will list the generated blog.

If the upload fails or is interrupted, you can retry uploading the file.

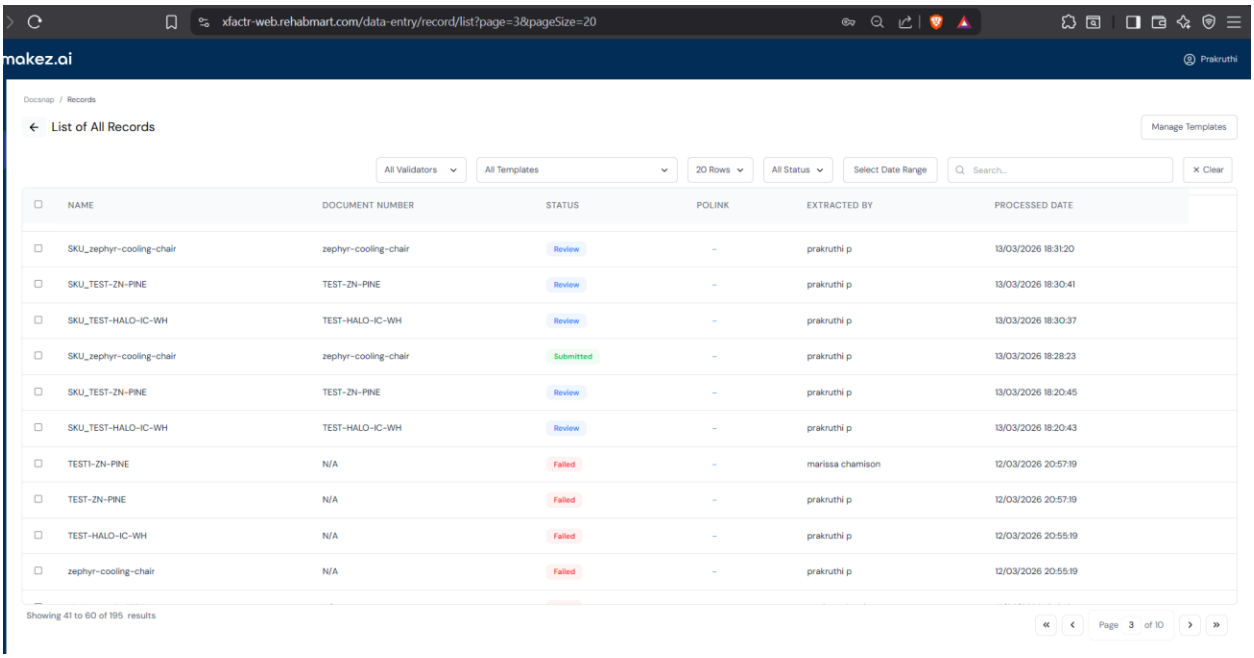

5.Review status

Once uploaded, generated blogs appear on the **Record Listing Page** with their corresponding status.
The initial status of a newly generated blog will be set to **“Review.”**

Status Definitions:

- **Review:** Blog generated and pending review by the user.
- **Submitted:** Click the **Submit** button to deploy the blog to the **Rehabmart** website.
- **Failed:** File rejected or data extraction failed (requires re-upload or manual correction).

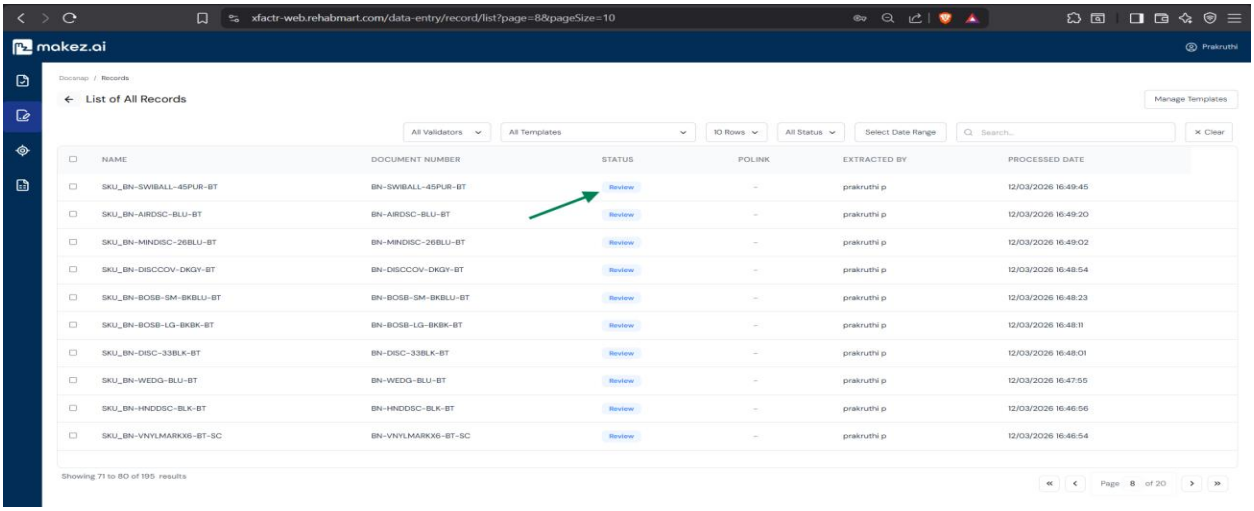

6.Review page

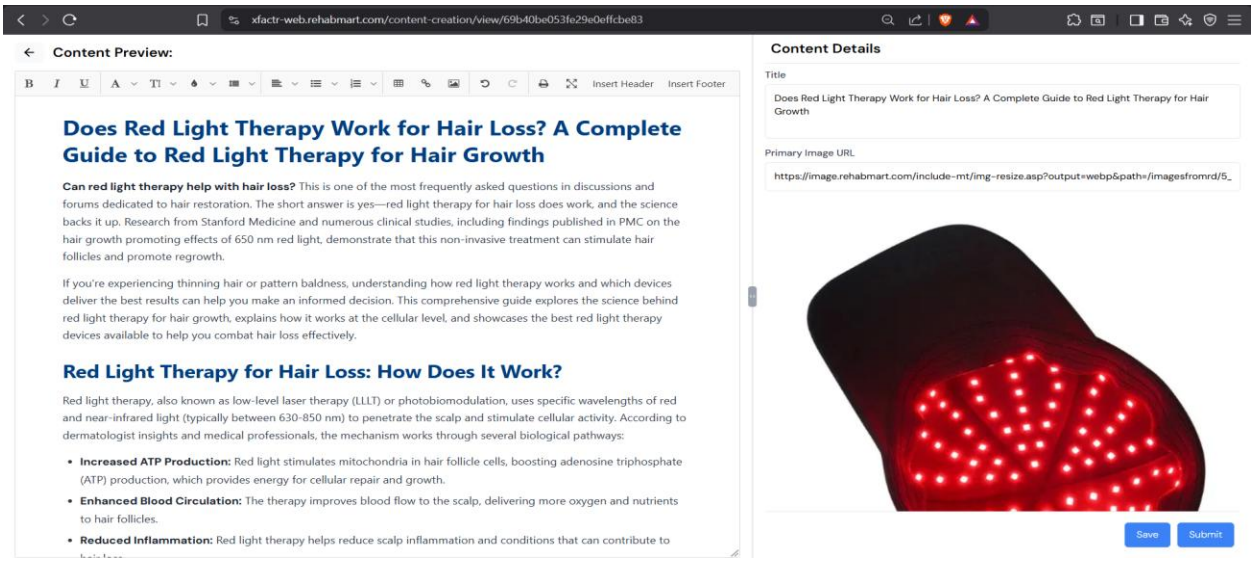

When the user clicks the **Review** button, they are redirected to the **Review Page**.

This page allows users to:

- View generated Blog
- Verify data accuracy and consistency.
- Identify any missing information or sections in the blog.
- Users can edit the blog content and its styling using the **Rich Text Editor**.

Users can navigate and validate details before submitting.

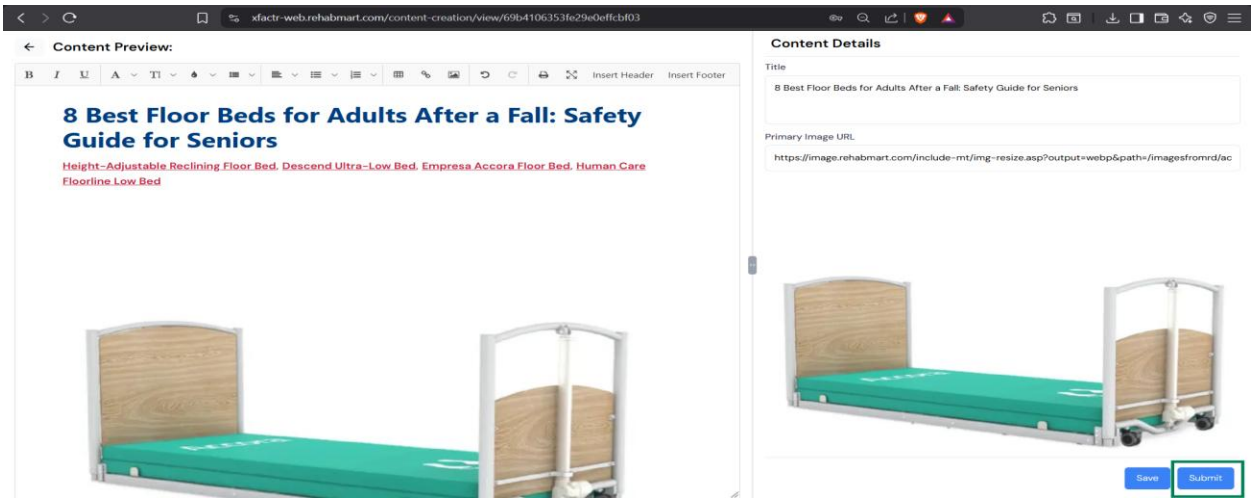

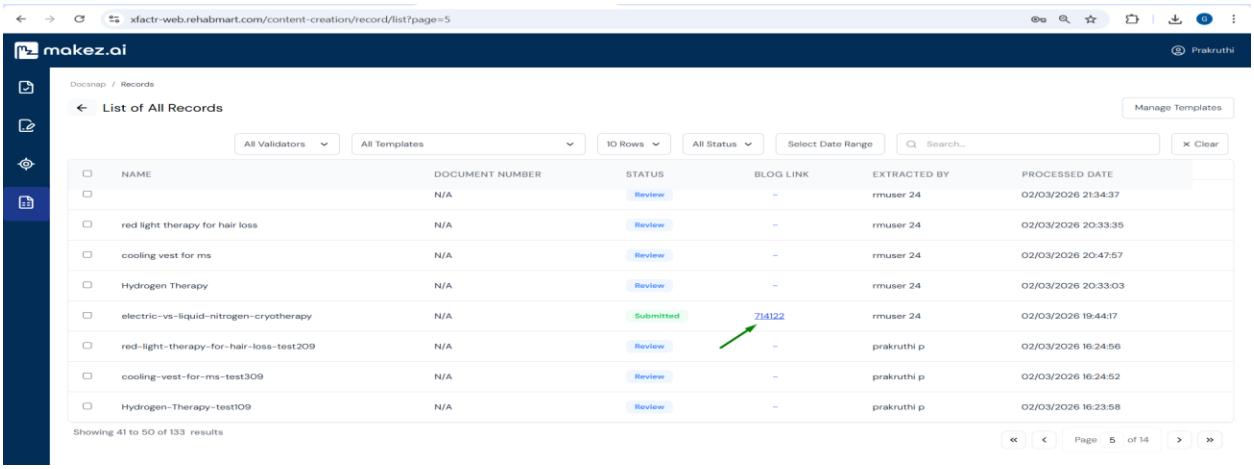

7.Submit option

Once the review and edits (if any) are completed, the user can finalize the process by clicking the **Submit** button. After submission, the user can view the blog on the **Rehabmart** website.

Steps to Submit:

1. Open the file with status **Review.**
2. Verify that all information is accurate.
3. Click the **Submit** button to post the blog in rehabmart.
4. Once the blog is submitted, a link will be generated. By clicking on the link, the user can view the submitted blog on the system.

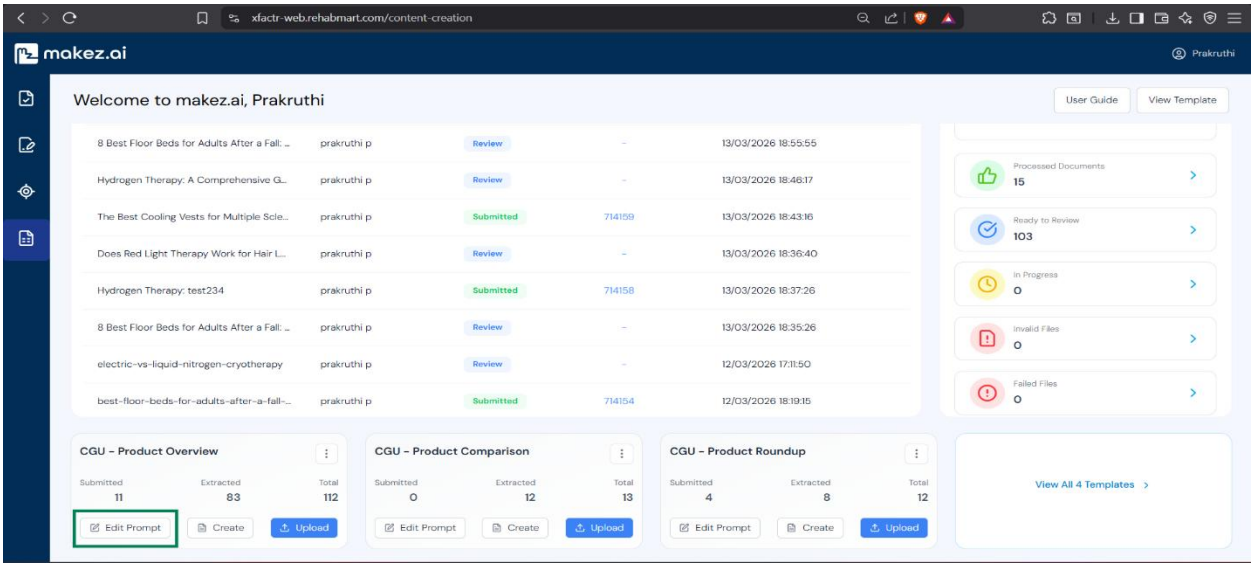

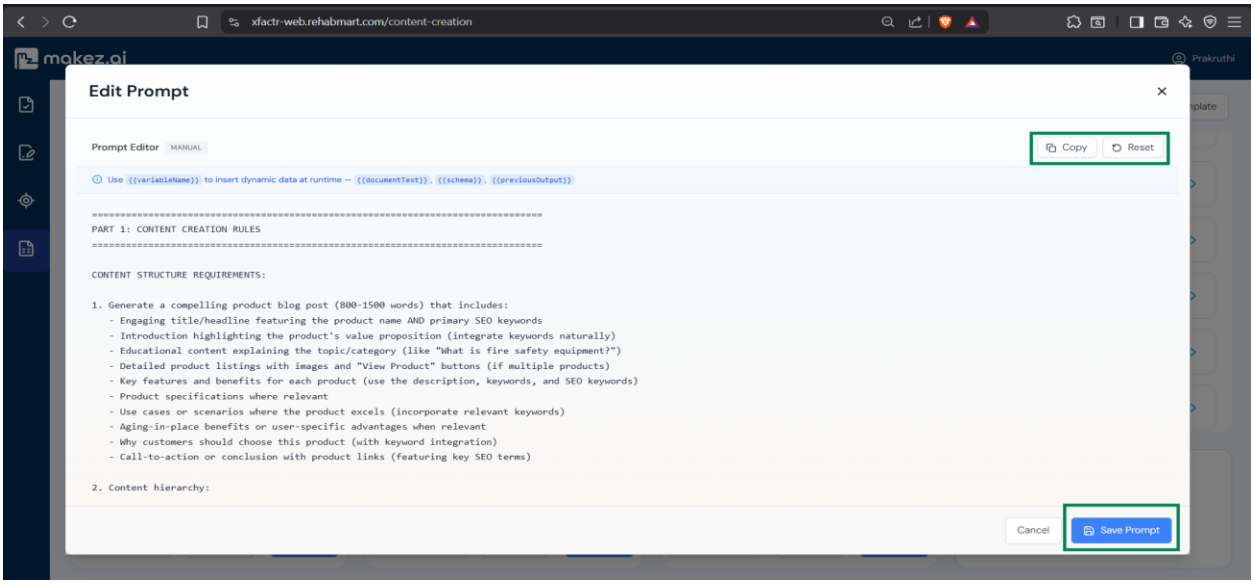

8. Edit Prompt

The **Edit Prompts** feature allows users to modify prompts so they can provide additional instructions to the AI and guide it to generate the desired output. This helps users refine the content generation process and ensure that the output aligns with their specific requirements and preferences.

Navigation Steps:

- Click on the **Edit Prompt** button on the template.
- The **Edit Prompt** page will open.
- Inside the **Prompt Page**, you will find options to **edit**, **copy**, and **reset** and **save** the prompt.

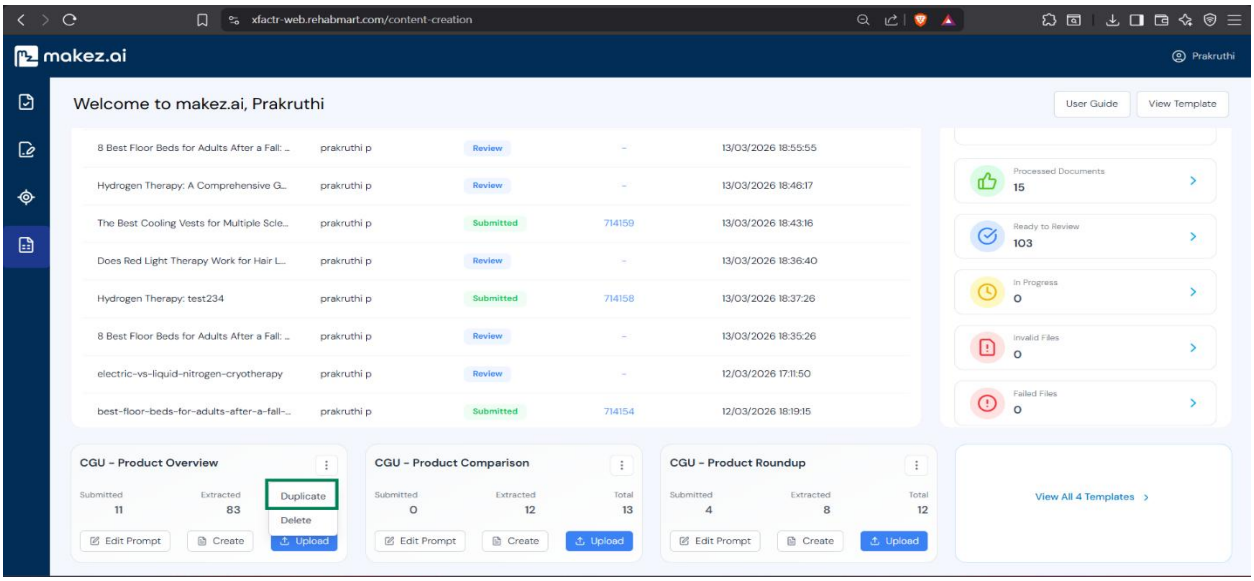

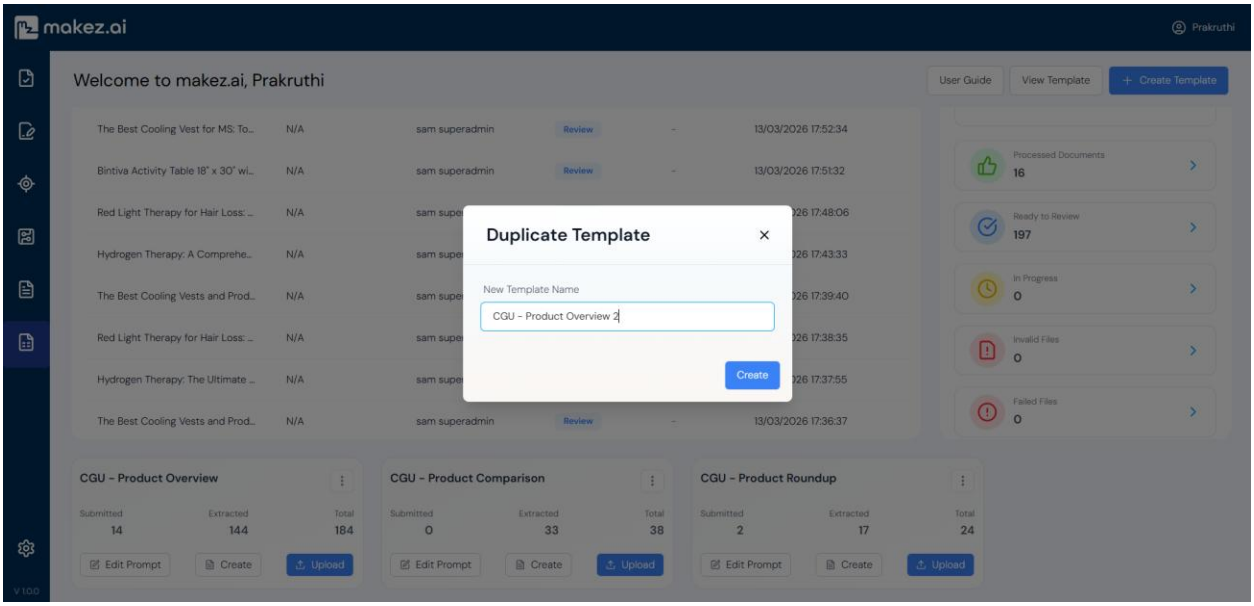

9.Duplicate button

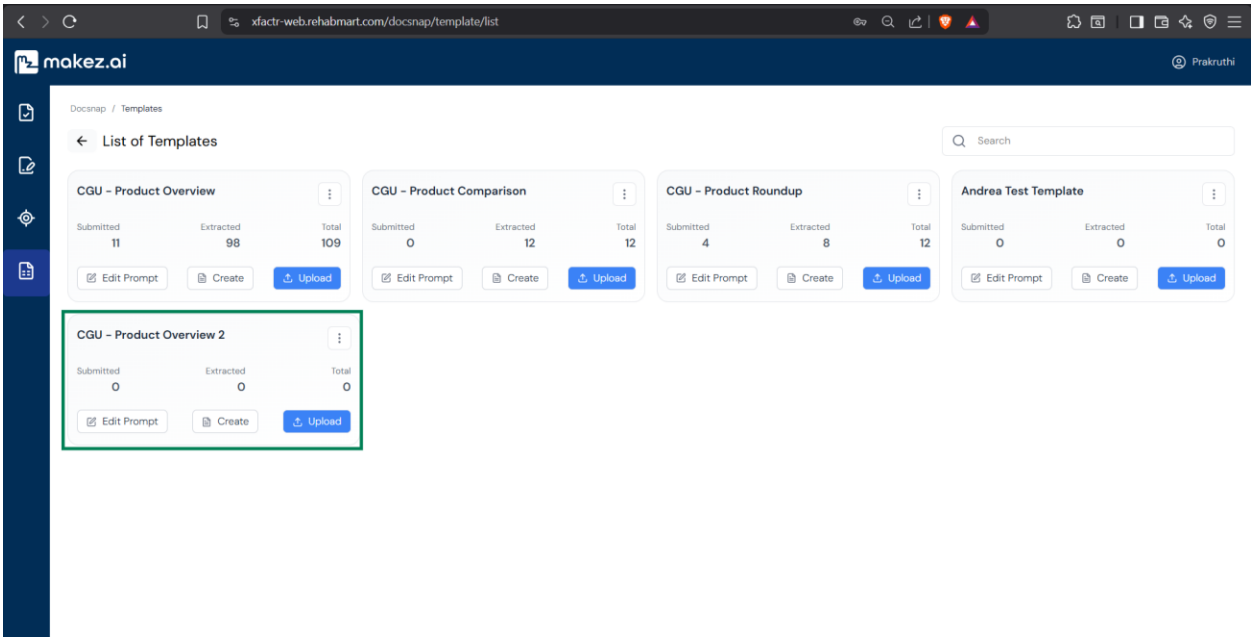

The **Duplicate** blog template feature allows users to create a copy of an existing template. This helps users quickly adopt new blog categories such as **OT Show** or **PT Show** without creating a template from scratch.

Steps to Create a Duplicate Template :

1. Click on the **Kebab Icon (⋮) menu** on the template.
2. Select the **Duplicate** option.
   In the **Duplicate Template** pop-up, rename the template name and click the **Create** button.
3. Once the user clicks the **Create** button, a new template will be created, as shown in the screenshot.

10. Regenerate Blog Content

The **Regenerate Blog** feature allows users to regenerate the blog content by selecting/deselecting the keywords. Based on the selected keywords, the system will regenerate the blog to better match the desired content and context.

Steps to Regenerate a Blog :

1. Inside the **Blog Review Page**, select or deselect the keywords as shown in the image.
2. Click the **Regenerate** button located near the **Submit** button.

Once the user clicks the **Regenerate** button, the system will regenerate the blog based on the selected keywords, as shown in the screenshot.
