Blog generation Module – User Manual v1.0

1. Login page

The user can log in using valid credentials.

- **Access URL:** https://xfactr-web.rehabmart.com/auth/login
- **Username:**
  Username1: rmuser24@gmail.com
  Username2: andrea.griffith@rehabmart.com
  Username3: rmuserhr1@gmail.com
- **Password:** Welcome@123 (this password is common for all the three users and can be reset from them after login)

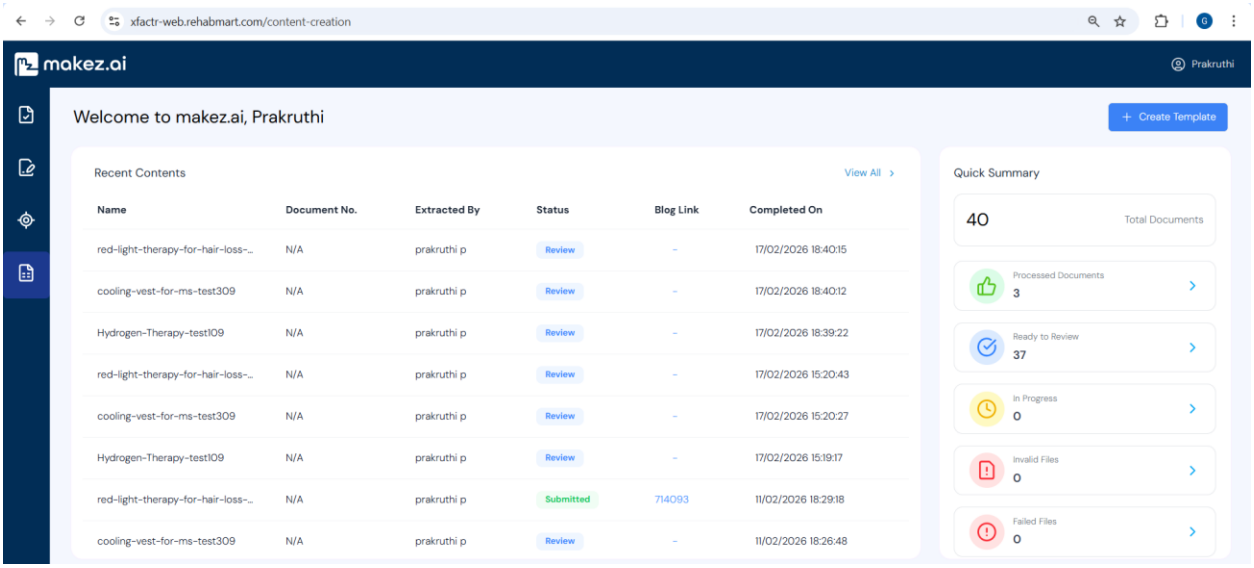

2.Home page

After successful login, the user is redirected to the **Home Page**, also referred to as the **Dashboard**.

Key Features:

- Displays a **summary of uploaded files** and their current status (e.g., *Pending, Review, Submitted*).
- Quick access to upload new files using the **Upload** button.

- View recent activity or status of ongoing reviews.

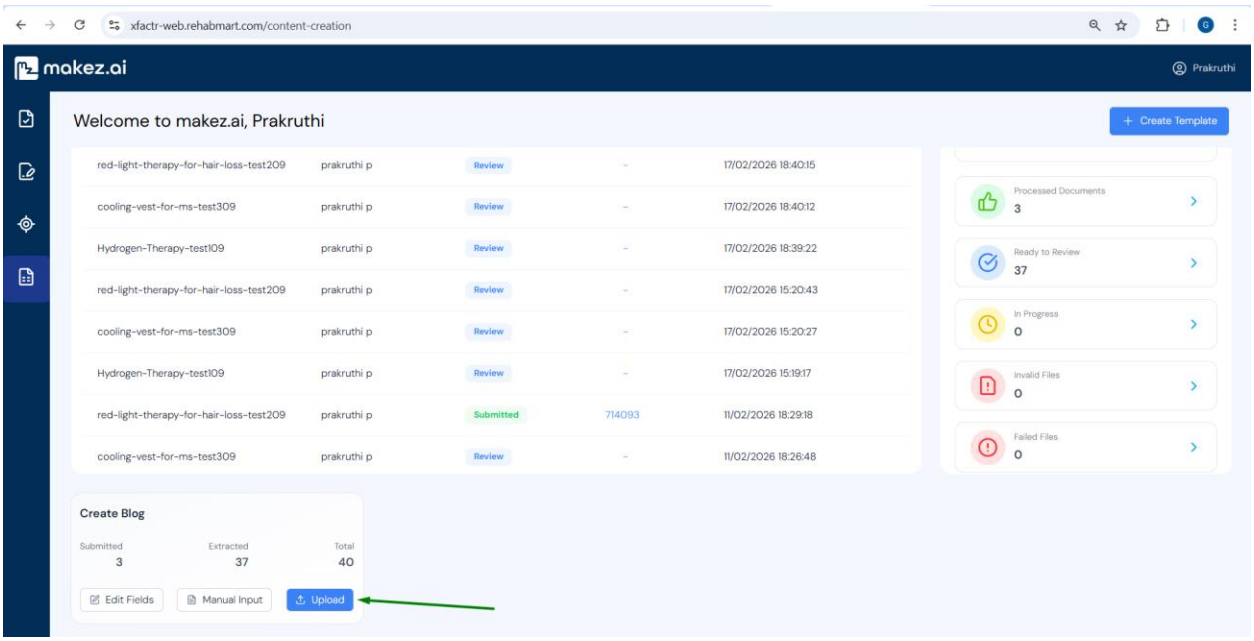

3.File Upload

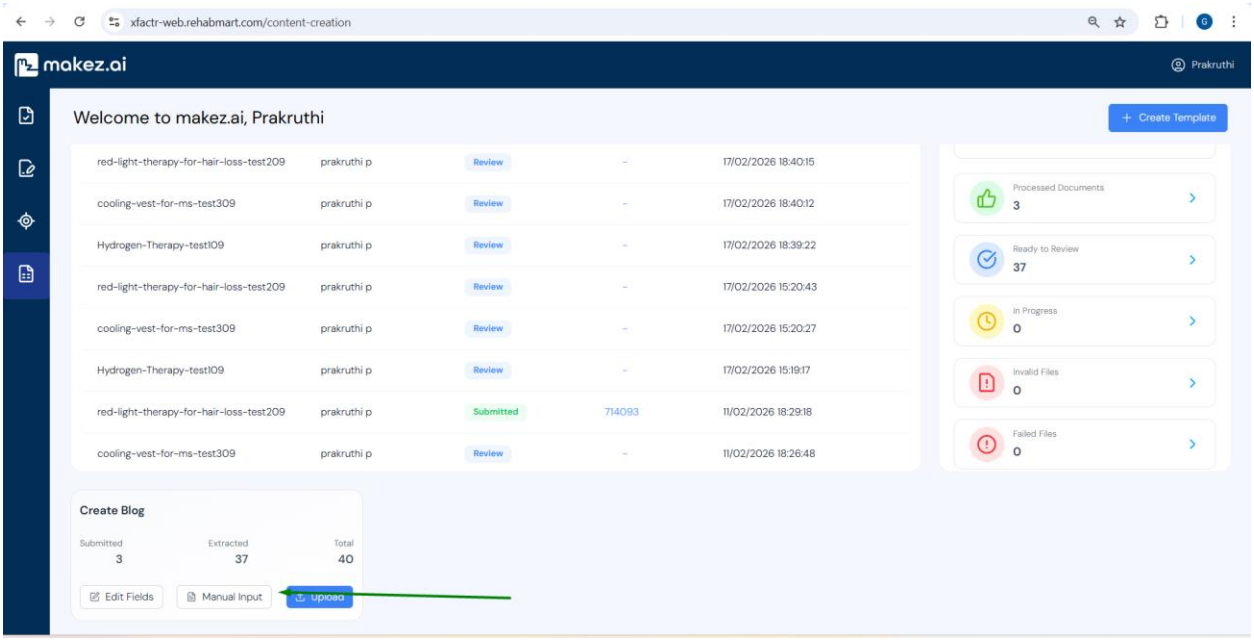

This module supports uploading structured data files for processing and extraction.

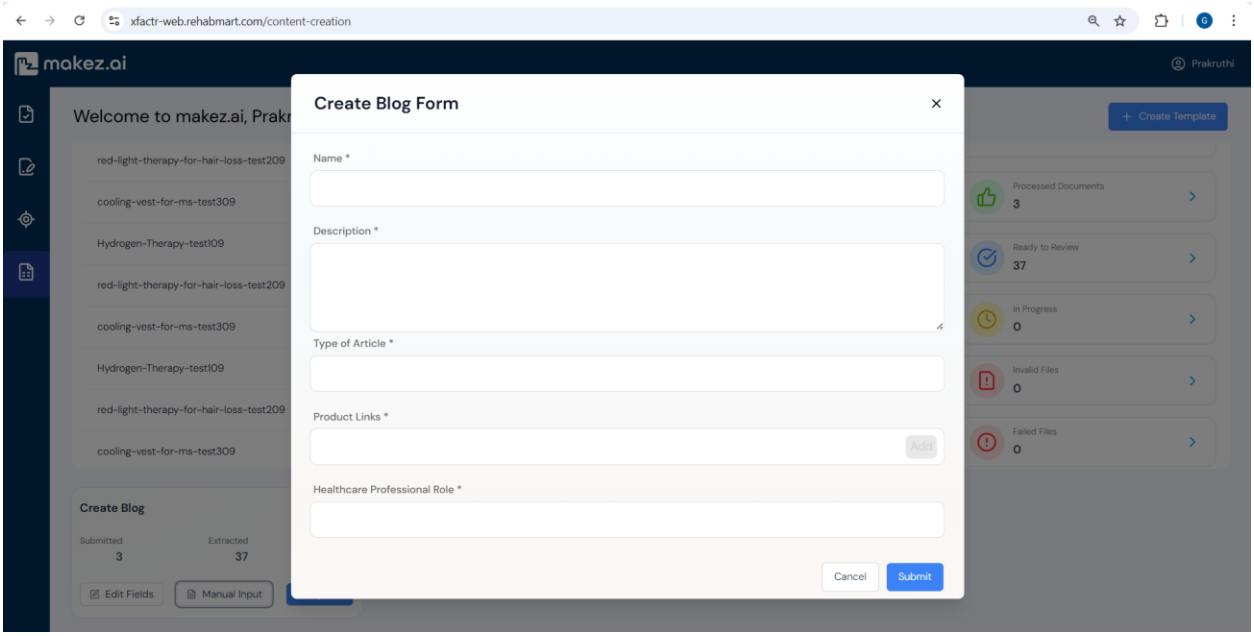

Steps to Upload a File:

1. Click the **Upload** button on the home page.
2. Select the appropriate file based on the provided **template format**. For time being upto 5 product details can be uploaded.
3. Click **Open** to start the upload process.
4. Or user can manually add input and Click on submit button

Upload

4.Progress Bar

After uploading a file, a **progress bar** appears to indicate the upload status.

- The bar shows **the real-time progress** of blog submission to the system.
- Once complete, the system automatically processes the file and begins data extraction.

If the upload fails or is interrupted, you can retry uploading the file.

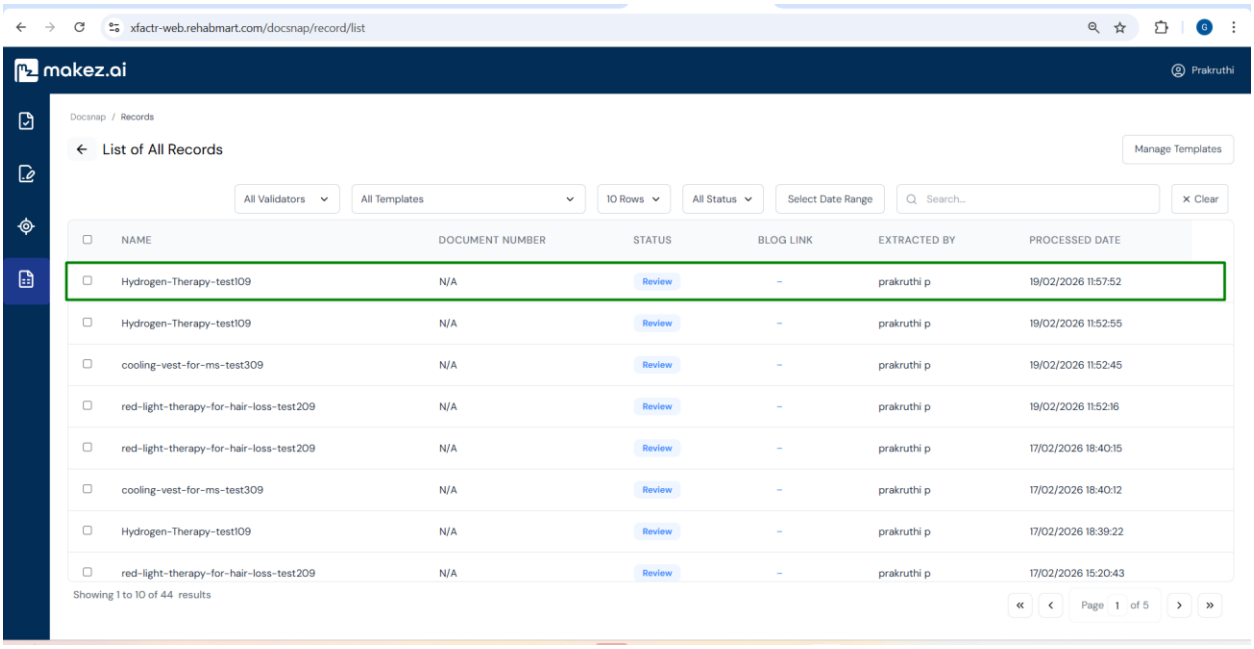

5.Review status

Once uploaded, blogs appear on the **File Listing Page** with their corresponding status. The initial status of a newly uploaded file will be set to **“Review.”**

Status Definitions:

- **Review:** Blog uploaded and pending validation by the user.
- **Submitted:** Review completed and data submitted for approval.
- **Failed:** File rejected or data extraction failed (requires re-upload or manual correction).

6.Comparison page

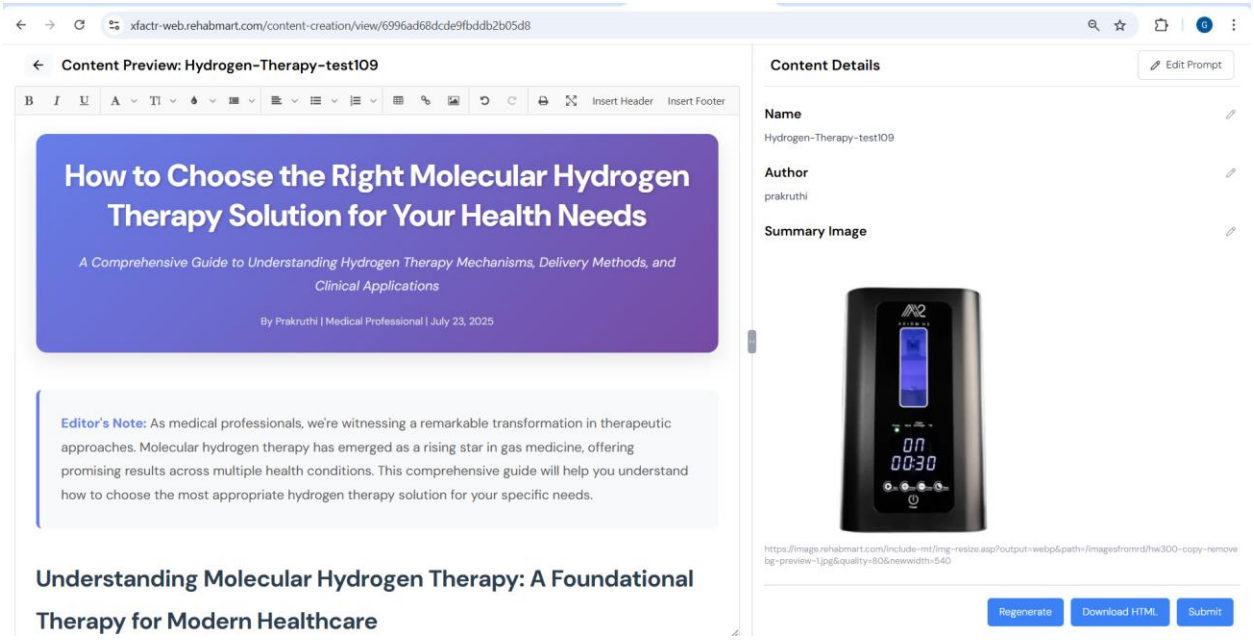

When the user clicks on the **Review** button next to a blog, they are redirected to the **Comparison Page**.

Purpose:

This page allows users to:

- View generated Blog
- Verify data accuracy and consistency.
- Identify any missing

Users can navigate and validate details before submitting.

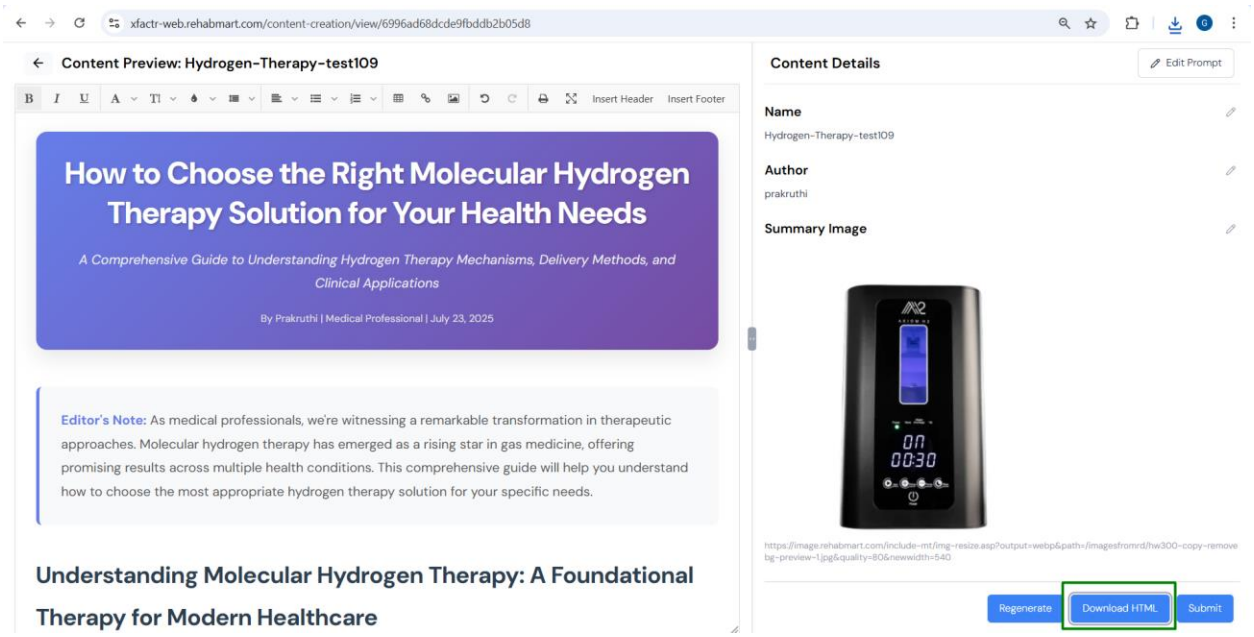

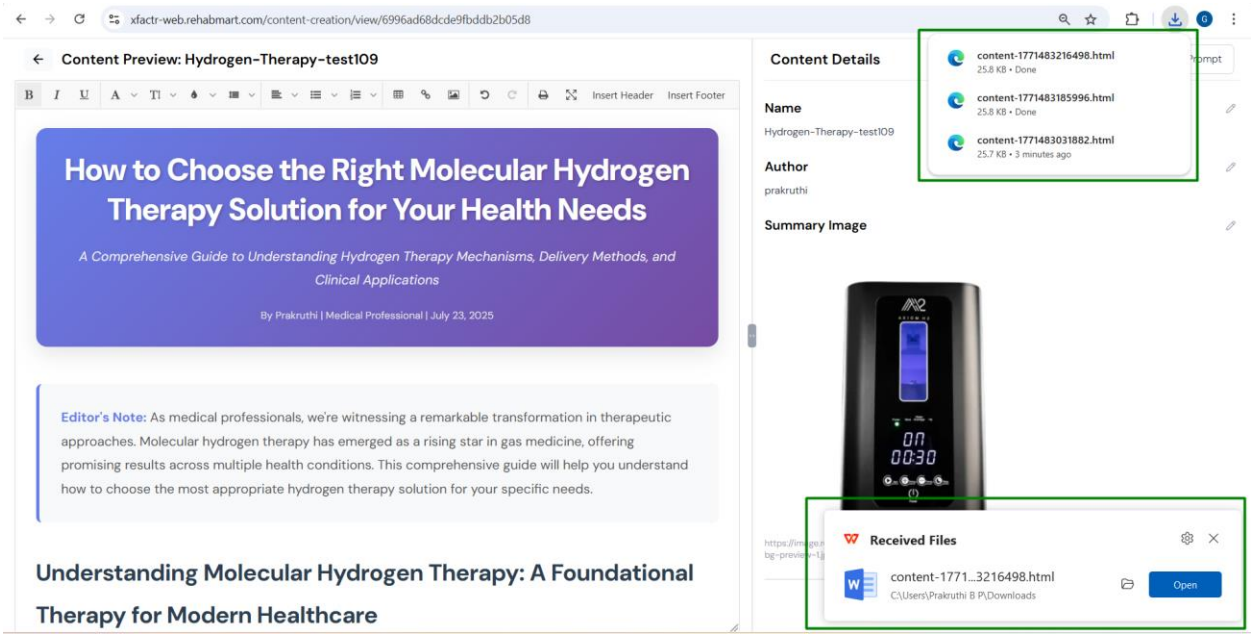

7.Export option

The module allows users to export processed data or blog

Steps to Export:

1. Navigate to the processed blog.
2. Click on the Download HTML button.
3. The file will be downloaded to your local system

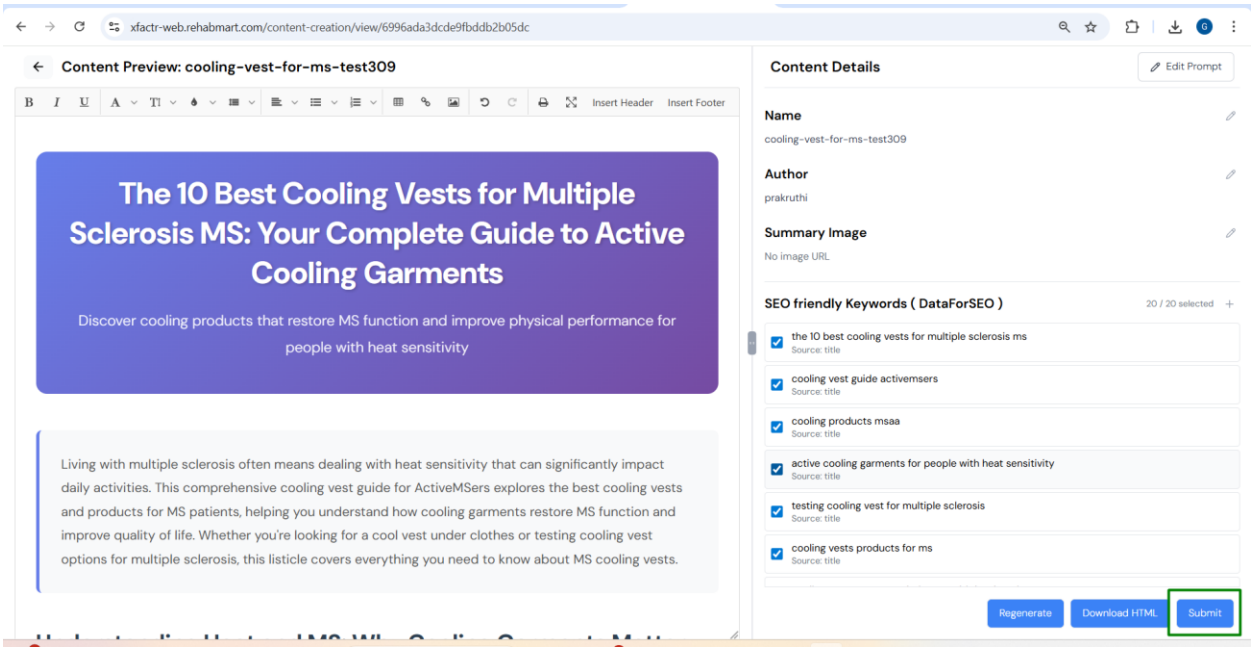

9.Submit option

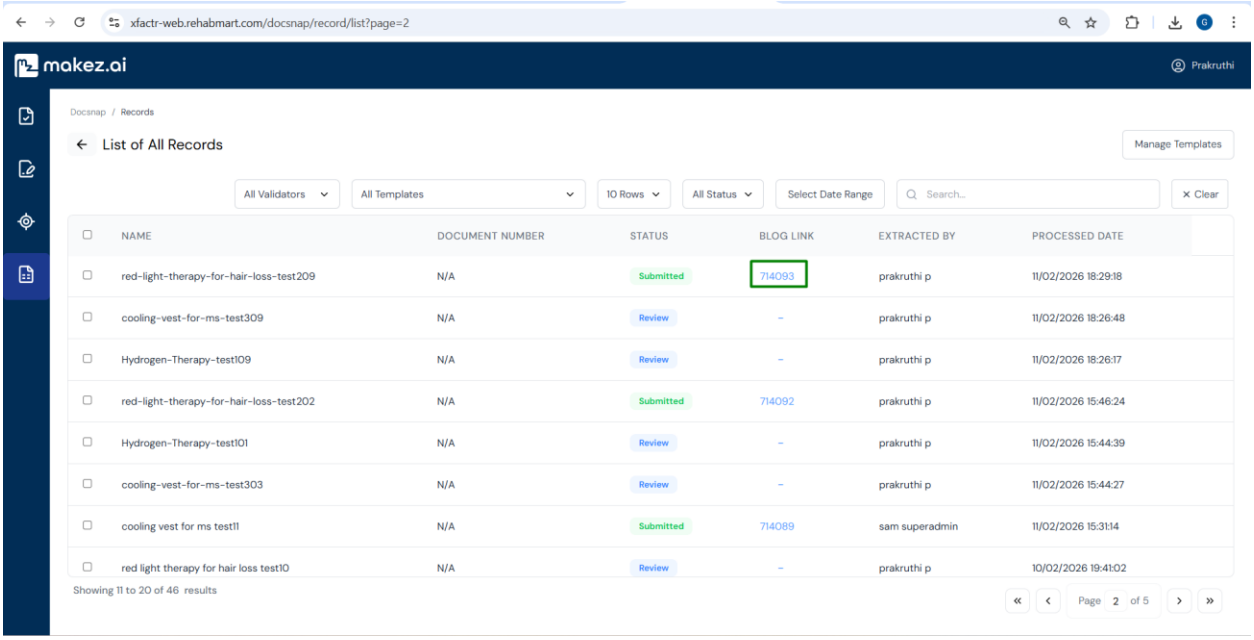

Once the review and edits (if any) are completed, the user must finalize the process by submitting the reviewed blog.

Steps to Submit:

1. Open the file with status **Review.**
2. Verify that all information is accurate.

3. Click the **Submit** button to finalize the record.
4. Once the blog is submitted, a link will be generated. By clicking on the link, the user can view the submitted blog on the system.

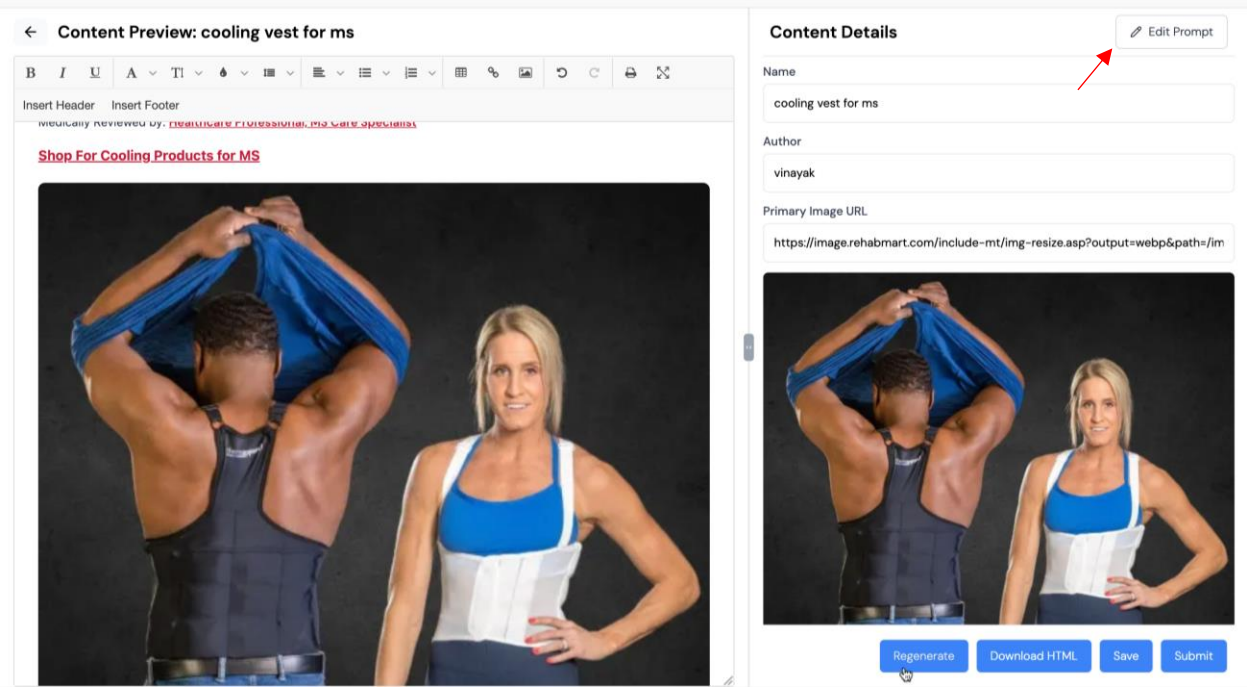

Steps to Edit Prompt, Regenerate Blog, and Download HTML

1. **Open the Content Preview Page**

- Navigate to the **Content Preview** screen where your blog (e.g., *“cooling vest for ms”*) is displayed.
- You will see:
    - The blog content editor on the left
    - **Content Details** (Name, Author, Primary Image URL) on the right

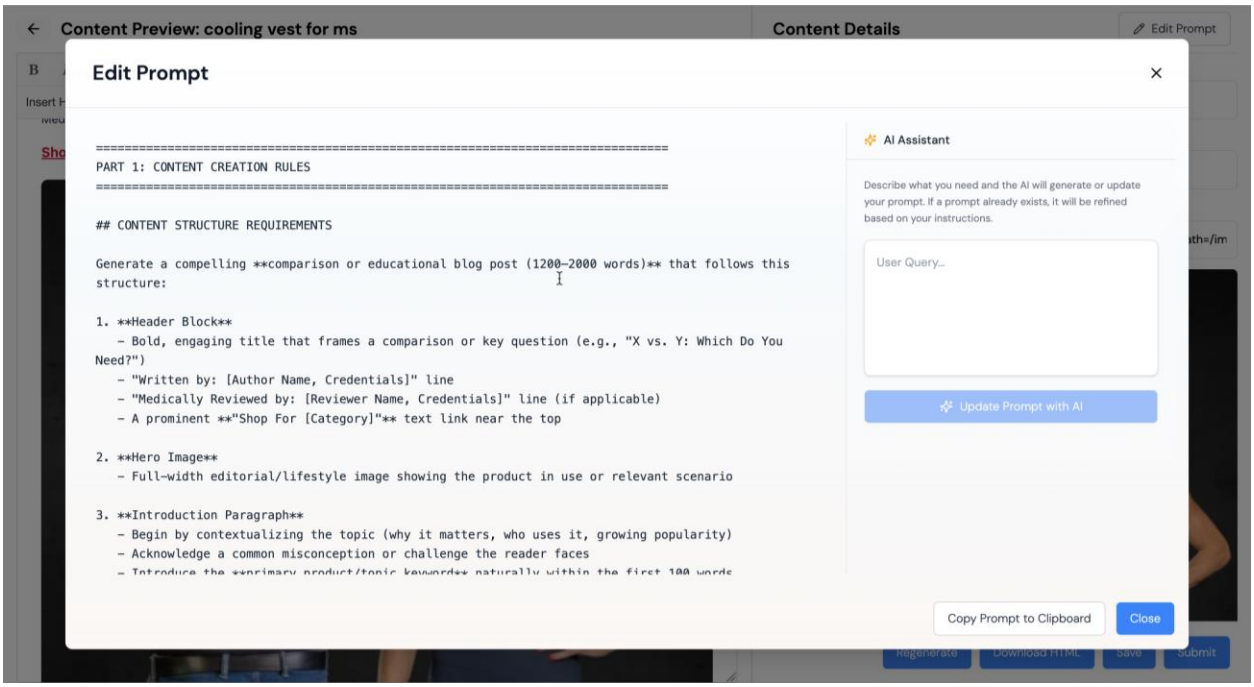

2. Click on Edit Prompt

- In the **Content Details** section (top right), click the **Edit Prompt** button.
- This opens the **Edit Prompt** modal.

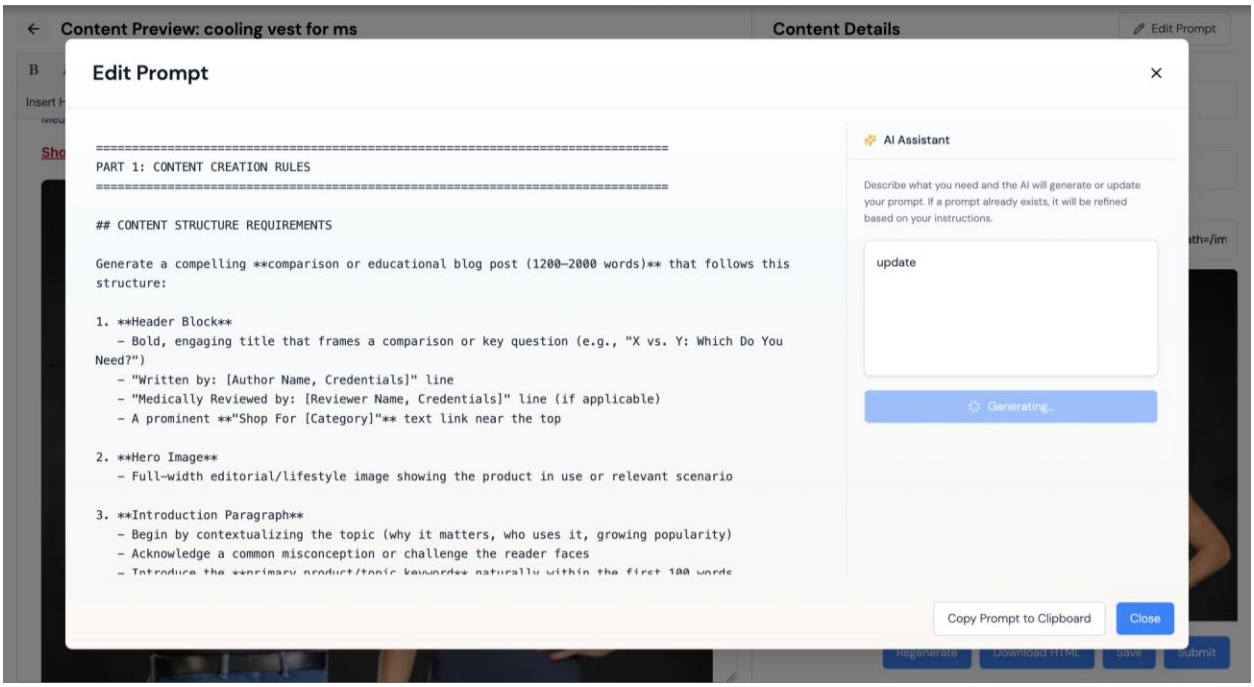

3. Review the Existing Prompt

- In the **Edit Prompt** modal:
    - The left panel shows the existing **Content Creation Rules** and structure.
    - The right panel shows the **AI Assistant** input box.
    - Save the current prompt on **copy to clipboard** option to save the original prompt

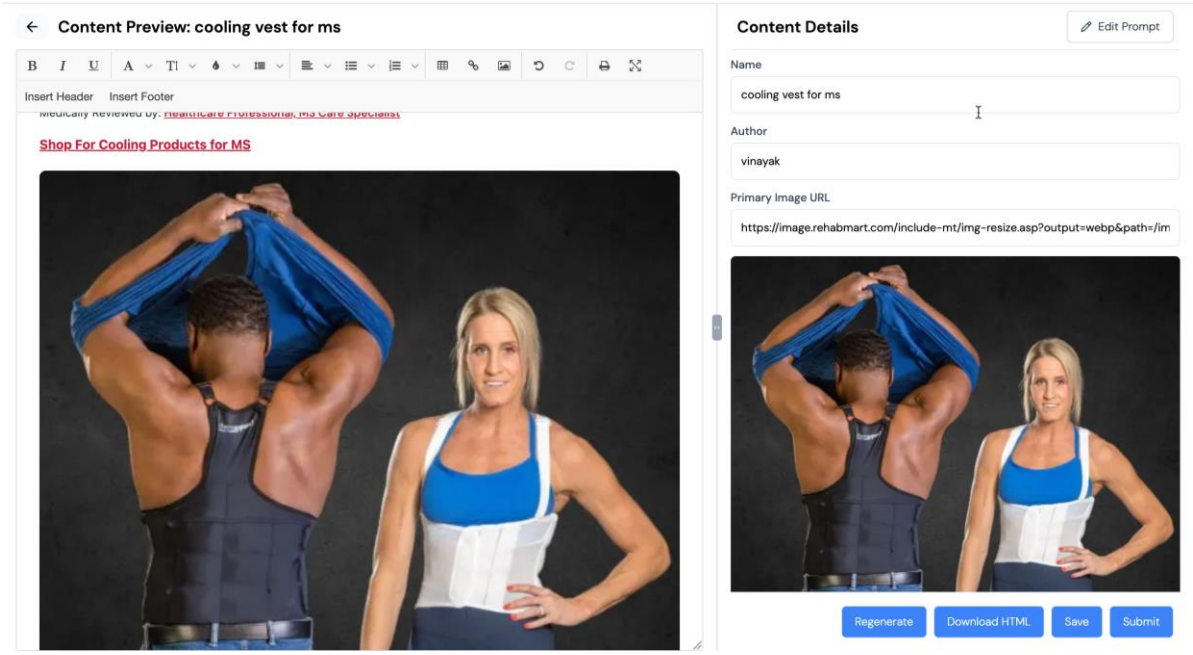

4. Update the Prompt Using AI Assistant

- In the **AI Assistant** text box on the right:
  - Enter the change you want to apply
    Example: resize the hero image with compact size
- Click **Update Prompt with AI**.
- Wait for the system to process and refine the prompt based on your instructions.
  Once the prompt update is complete:
- Click **Close**
- You'll return to the **Content Preview** page.

5. Regenerate the Blog Content

- At the bottom of the Content Preview page, click **Regenerate**.
- The blog content will be regenerated according to the **updated prompt**.

6. Review the Updated Blog

- Verify that:

- The hero image reflects the updated instruction (e.g., compact size)
- Content structure and formatting are correct

7. Save the Content

- Click **Save** to store the regenerated content.

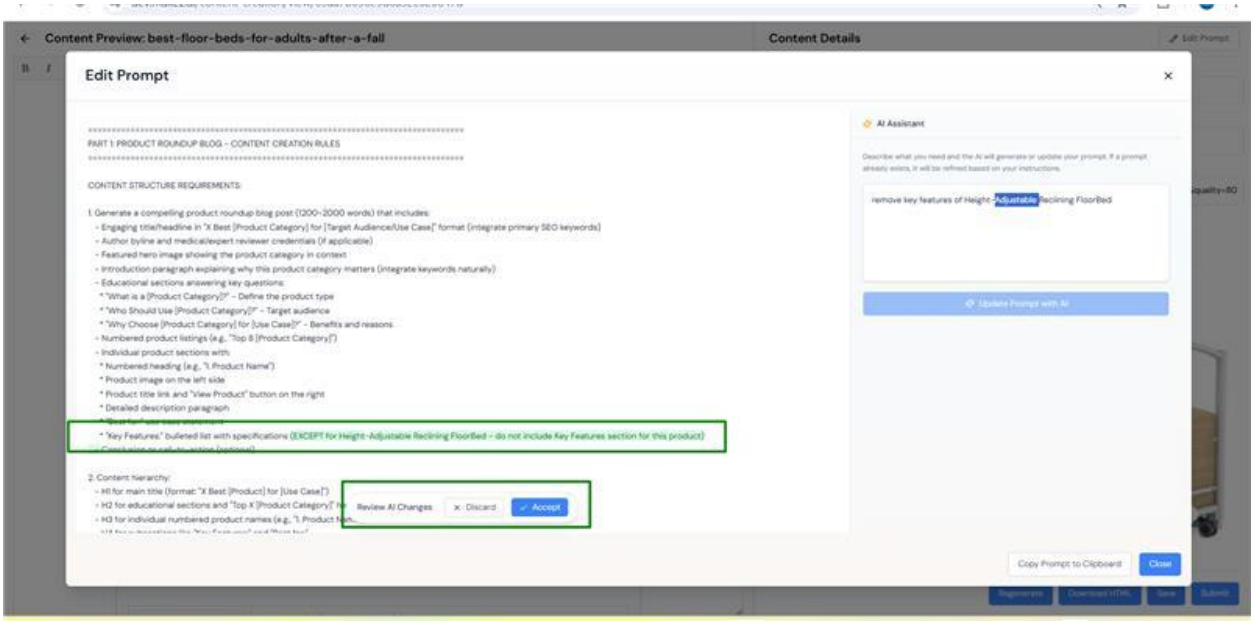

8. Download the Blog as HTML

- Click **Download HTML** to export the blog in HTML format.
- The HTML file can now be used for publishing or further integration.

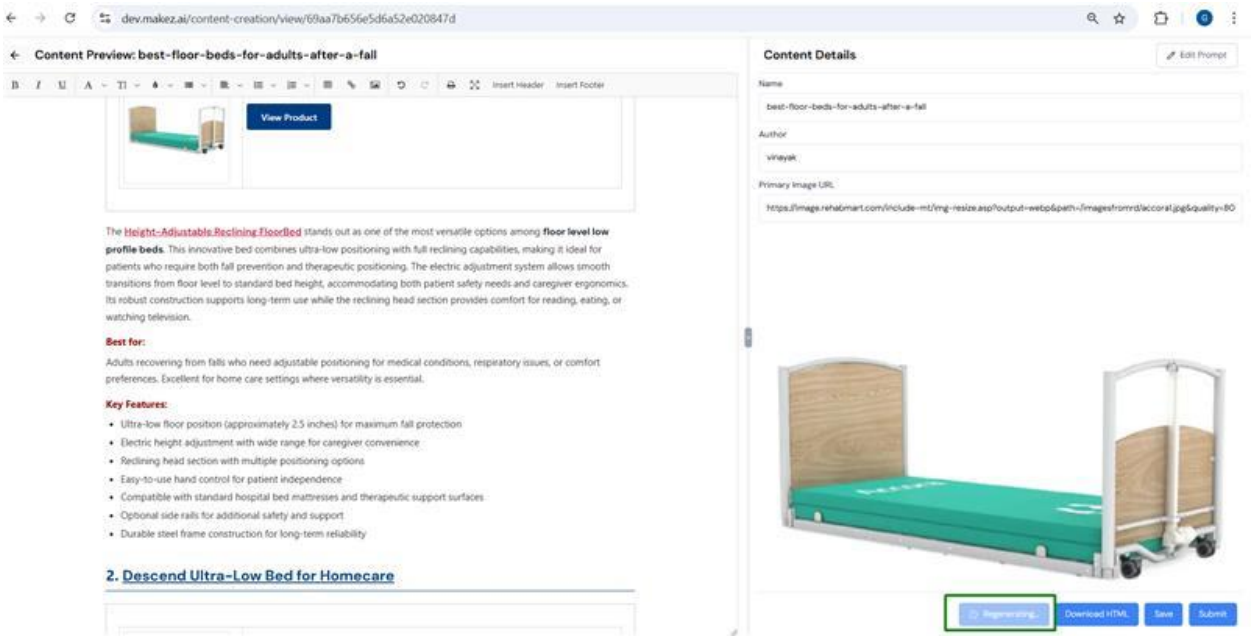

V2 Release

9. Edit Prompt:

- If the **user edits the prompt**, the changes will be highlighted — **green for added text** and **red for removed or modified text.**

- After clicking **Regenerate**, the **blog will update based on the edited prompt**. These changes are **not saved in the database or template** and apply **only to the current generated blog**.

The Height-Adjustable Reclining FloorBed stands out as one of the most versatile options among floor level low profile beds. This innovative bed combines ultra-low positioning with full reclining capabilities, making it ideal for patients who require both fall prevention and therapeutic positioning. The electric adjustment system allows smooth transitions from floor level to standard bed height, accommodating both patient safety needs and caregiver ergonomics. Its robust construction supports long-term use while the reclining head section provides comfort for reading, eating, or watching television.
Best for:
Adults recovering from falls who need adjustable positioning for medical conditions, respiratory issues, or comfort preferences. Excellent for home care settings where versatility is essential.
Key Features:
Ultra-low floor position (approximately 2.5 inches) for maximum fall protection
Electric height adjustment with wide range for caregiver convenience
Reclining head section with multiple positioning options
Easy-to-use hand control for patient independence
Compatible with standard hospital bed mattresses and therapeutic support surfaces
Optional side rails for additional safety and support
Durable steel frame construction for long-term reliability
2. Descend Ultra-Low Bed for Homecare
